What this standard covers

This standard specifies the soil particle size distribution of the quantitative test methods.
This standard applies to the quantitative determination of soil particle size analysis.
Particles larger than 75µm (retained on 200 mesh sieve) particle size distribution was determined by sieving, size of less than 75µm particle size distribution, by settling process using liquid density measurement was determined the necessary data.

Document data

International classification (ICS): 13.300; 11.100.

Chinese classification (CCS): A80.

Estimated length of the Chinese original: 17,189 words.

Standards quoted by this document
