Import and export goods declaration wood packaging specifications

1 Scope

China's national declaration rules for the wood packing material of imported and exported cargo. It specifies what is declared about wood packaging when goods enter or leave the country, how the declaration is made, and what the declaring party is responsible for. Wood packaging is regulated by treatment and marking rather than by inspection, and the declaration is the part of the system that connects the pallet to the paperwork. Without it, a consignment arrives and the authority has no advance information about whether it contains wood packaging at all - which means either every consignment is examined, which is impossible, or none is, which defeats the regime. The declaration tells the authority what

to expect: whether the consignment contains wood packaging, whether that packaging has been treated and marked, and by whom. That in turn allows the inspection effort to go where it is worth spending, and it makes the consignee or the exporter responsible for a statement rather than for a hope. The rules therefore cover the content of the declaration, the point at which it is made, the party responsible for making it, the treatment of consignments whose packaging is exempt - processed wood materials, packaging made entirely of manufactured board - and the handling of a declaration that turns out to be wrong. The last of those is the operative part: a false or careless declaration is what the regime is enforced against, because the pallet itself gives the authority nothing to enforce against once the container has been unpacked and the packaging has gone into a yard somewhere. Issued on 5 November 2012 and in force since 1 December 2012.

This standard specifies the entry and exit of wood packaging declaration procedures, specifications, special logo and so on. This standard applies to the use of wood packaging import and export business and agency, Oxfam logo business, but also as the import and export of wood packaging Declared specifications.

2 Normative references

The following documents for the application of this document is essential. For dated references, only the dated edition applies to this article Member. For undated references, the latest edition (including any amendments) applies to this document.
