

**NATIONAL STANDARD OF THE  
PEOPLE'S REPUBLIC OF CHINA**

**GB/T 2951.11-2008**

---

**Common test methods for insulating and sheathing materials of electric and optical  
cables -- Part 11: Methods for general application -- Measurement of thickness and  
overall dimensions -- Tests for determining the mechanical properties**

电缆和光缆绝缘和护套材料通用试验方法 第11部分：通用试验方法 厚度和外形  
尺寸测量 机械性能试验

## Table of Contents

|       |                                                                                       |
|-------|---------------------------------------------------------------------------------------|
| 1     | Scope                                                                                 |
| 1.1   | Normative references                                                                  |
| 2     | Test principle                                                                        |
| 3     | Scope of application                                                                  |
| 7.1   | The maximum value reached by the load during the test.                                |
| 7.2   | The tensile force per unit area when the test piece is not stretched.                 |
| 7.3   | The maximum tensile stress recorded when the specimen is stretched to break.          |
| 8     | Measurement of thickness and dimensions                                               |
| 8.1   | Measurement of insulation thickness                                                   |
| 8.1.1 | Overview                                                                              |
| 8.1.2 | Measuring device                                                                      |
| 8.1.3 | Preparation of test pieces                                                            |
| 8.1.4 | Measurement steps                                                                     |
| 8.1.5 | Assessment of measurement results                                                     |
| 8.2   | Non-metallic sheath thickness measurement                                             |
| 8.2.1 | Overview                                                                              |
| 8.2.2 | Measuring device                                                                      |
| 8.2.3 | Preparation of test pieces                                                            |
| 8.2.4 | Measurement steps                                                                     |
| 8.2.5 | Assessment of measurement results                                                     |
| 8.3   | Dimensional measurement                                                               |
| 8.3.1 | Overview                                                                              |
| 8.3.2 | Measurement steps                                                                     |
| 8.3.3 | Assessment of measurement results                                                     |
| 9     | Methods for measuring the mechanical properties of insulating and sheathing materials |
| 9.1   | Insulation materials                                                                  |
| 9.1.1 | Overview                                                                              |
| 9.1.2 | Sampling                                                                              |
| 9.1.3 | Preparation and handling of test pieces                                               |
| 9.1.4 | Measurement of cross-sectional area                                                   |
