What this standard covers

This Standard specifies the assessment as defined in the piping system remain in service beyond the design life of the feasibility of the minimum required guidelines. This Standard is shown in Figure 1 pumping station, compressor station, vacuum station, and reservoirs without any specific requirements. This Standard applies to rigid metal conduit, does not apply to the following conditions: a) a flexible pipe; b) other material conduit, such as glass pipes; c) umbilicals; d) platform upper structure and facilities; e) structures and structural components. As an example of this standard to make changes to the original design, and used only for the pipeline life extension. It does not include other changes, such as increased MAOP.

Document data

International classification (ICS): 75.200.

Chinese classification (CCS): E98.

Estimated length of the Chinese original: 22,271 words.

Adopted international standard: ISO 12747-2011, IDT.
