Foreword

GB/T 31722-2025 is a recommended national standard (GB/T) of the People's Republic of China, issued on 1 August 2025 by the State Administration for Market Regulation and the Standardization Administration of China, with effect from 1 February 2026.

This edition replaces GB/T 31722-2015.

The document adopts an international standard (ISO or IEC).

It is under the responsibility of the Standardization Administration of China.

Classification: ICS 35.030; CCS L80.

1 Scope

Organisations that handle information face a constant need to identify, evaluate and treat security risks in a structured way. This document provides guidance on managing information security risks, and it sits in the cybersecurity technology family of Chinese national standards.

Being guidance, it is meant to support those who set up or run a risk management process, rather than to prescribe a single mandatory procedure. Typical readers include information security managers, risk and compliance officers, system owners, consultants and auditors, as well as technology suppliers who need to explain their risk practices to customers in China.

The standard was issued on 1 August 2025 and takes effect on 1 February 2026, replacing GB/T 31722-2015. It is a recommended national standard, which means adoption is voluntary unless a regulator, customer contract or internal policy requires it. Teams that built their risk programmes on the 2015 edition should review the new version when planning their next update cycle.
