What this standard covers

This Standard specifies the skimmers to quantitatively determine the performance data under dynamic conditions of the process water, so that end users can objectively judge, compare and evaluate different types of skimming device design and performance. This method is suitable for testing in the sink and the control requirements specified characteristics and properties of the oil slick. This Standard applies to the size of the equipment in the test water plant size to limit the scope of the various types of skimmers. Under controlled conditions, this test procedure provides a full range of results for the device under test and one or more oil.

Document data

International classification (ICS): 13.020.99; 47.020.99.

Chinese classification (CCS): U47.

Estimated length of the Chinese original: 19,147 words.

Adopted international standard: ISO 21072-1-2009, IDT.
