What this standard covers

This standard specifies the underwater acoustic transducer under free-field calibration method spherical wave conditions: reciprocity law and comparative law. This standard applies reciprocity law and hydrophone calibration standard sound source; comparative law applicable to the calibration measurement hydrophone and underwater acoustic transmitters. Frequency range of several hundred Hz to several MHz. All measurements are the standard under steady-state conditions.

Document data

International classification (ICS): 17.140.10.

Chinese classification (CCS): A42.

Estimated length of the Chinese original: 20,226 words.

Supersedes the earlier edition GB 3223-1982.
