What this standard covers

This standard applies to trees and shrubs crop sprayer spray ground measuring the amount of accumulated field. This standard contains deposited on the leaves, fruits and other target objects on the ground as well as the volume and quality loss spray amount (absolute amount and distribution of both) Determination. This standard does not involve the determination of the amount of spray drift. However, this standard spray and GB /T 24681 given drift field measurement method used in conjunction, can achieve a good balance of trees and shrubs in the spray quality of the evaluation results in the determination of airborne drift time. Standard test procedures specified in this standard for flexible arrangements for field testing to help different field trials or laboratory tests (such as using the vertical distribution of the test apparatus) comparison of results.

Document data

International classification (ICS): 65.060.40.

Chinese classification (CCS): B91.

Estimated length of the Chinese original: 18,114 words.

Adopted international standard: ISO 22522-2007, MOD.
