Foreword

GB/T 35795-2026 is a recommended national standard (GB/T) of the People's Republic of China, issued on 28 September 2026 by the State Administration for Market Regulation and the Standardization Administration of China, with effect from 1 April 2027.

This edition replaces GB/T 35795-2017.

It is under the responsibility of the Standardization Administration of China.

Classification: ICS 83.080.01; CCS Y 28.

1 Scope

Fully biodegradable mulching film for agricultural use is the subject of this standard. Mulching film is laid over soil to conserve moisture, moderate temperature, and suppress weeds, and biodegradable versions are intended to reduce the plastic residue left in fields after harvest. The document gives a national reference for this product type.

Film manufacturers, resin and additive suppliers, agricultural cooperatives and large farms that purchase mulch film, testing laboratories, and regulators with an interest in agricultural plastic pollution may use it. It is a recommended national standard (GB/T), so it is voluntary unless a contract, tender, or program requires it. This edition replaces GB/T 35795-2017 and was issued on 28 September 2026, taking effect on 1 April 2027. Buyers and suppliers who reference the earlier edition in their product specifications will need to check which version their agreements point to once the new one is in force.
