What this standard covers

This standard specifies the method for determining the sulfur content of dark petroleum products with a tube furnace. This standard applies to the sulfur content greater than 0. 1% (m/m) of dark petroleum products, such as lubricating oil, heavy petroleum products, crude oil, petroleum coke, paraffin and sulfur-containing additives. This standard does not apply to contain metals, phosphorus and oxygen additives, and lubricants containing such additives.

Document data

International classification (ICS): 75.08.

Chinese classification (CCS): E30.

Estimated length of the Chinese original: 5,531 words.

Adopted international standard: ????????? 1437-1975, NEQ.

Supersedes the earlier edition GB 387-1964.
