Foreword

This document is in accordance with the provisions of GB/T 1.1-2020 "Guidelines for Standardization Work Part 1. Structure and Drafting Rules of Standardization Documents"

Drafting.

The translation method used in this document is equivalent to the adoption of ISO 37101:2016 "Requirements for Sustainable Development Management System of Cities and Communities"

Seek and use guide.

This document has made the following minimal editorial changes.

---Added a note on the term "3.14 Environment".

Introduction

This document adopts a comprehensive method to determine the requirements of the sustainable development management system of cities and communities, and provides guidance,

Aims to.

---Improve the contribution of cities and communities to sustainable development;

---Considering the scope of application of the standard, manage sustainability and promote the smartness and resilience of the city;

---Evaluate the performance of cities and communities in the process of sustainable development.

This document sets out to establish a coherent framework to enable cities and communities to develop their vision and purpose.

This document sets out relevant requirements and guidelines to help cities and communities achieve a more sustainable framework. This document does not set a benchmark for this

Or the expected level of performance.

Although the challenge of sustainable development is global, achieving a sustainable development strategy at the city and community level is to a large extent

Local, and therefore sustainable development strategies may vary from country to country and region. City and community strategies must reflect the environment, prerequisites,

Priorities and needs, special social environments, such as. social equity, cultural characteristics and traditions, heritage, human health, safety and comfort, and social infrastructure.

In order to further improve the level of sustainable development, cities are also facing another challenge. to abide by the earth's limit requirements and related restrictions

Factors are taken into consideration.

Note 1. The concept of "earth limit" describes a survival framework that mankind must comply with in consideration of continued development and the prosperity of future generations. climate change,

Fresh water consumption, land system changes and the disappearance of biodiversity are just some of the manifestations that are beyond the limits of the earth. Exceeding these limits may result in environmental

Sudden changes or irreversible changes occur, and adherence to these limits can greatly reduce such risks. When considering the specific situation, in order not to fight

To break the limit of the earth, we can choose countermeasures from the city level.

The sustainable development management of cities and communities covers a wide range of fields, such as. urban economic environment, social environment, natural environment and their relatives.

Related areas of interaction. These areas may involve strategic, operational and competitive aspects.

Note 2. The ability and common purpose to promote interdisciplinary integration and coordination is the fundamental way to effectively and efficiently achieve urban goals.

This document aims to strengthen the capacity of cities and communities based on local actions. Address environmental, social and economic issues, including improving urban

City and community services, improve economic and social benefits, support the clear purpose of sustainable development of cities and communities, and encourage the establishment of sound planning systems

Degree to achieve these goals.

This document focuses on making cities and communities the cornerstone of the sustainability of the entire society. Although every city and community has its own value

Views and interests, but all cities and communities can obtain common benefits from the ownership of common values and goals without exempting individual

The responsibilities of the actors. Only when cities and communities adopt long-term planning strategies while respecting the overall capabilities of the planet and the current and future

The needs of coming generations, including the ability and resources to provide resilience, can achieve sustainable development.

This document promotes the cooperation of all relevant parties to establish a multi-party city and community. Intended for implementation and this document

Related other management systems (such as GB/T 24001-2016, GB/T 45001-2020, GB/T 23331-2020, ISO.20121,

GB/T 33859-2017 and GB/T 36000-2015 organizations provide guidance, regardless of whether these organizations directly or indirectly participate in the city and society.

Any stage of the district's sustainable development life cycle.

Stakeholders can participate in it in different ways, such as.

---Participate in partnerships;

---public participation;

---Based on the cooperation between the city and the community.

All forms are designed to allow relevant parties to participate in cooperative dialogues in order to find more sustainable solutions.

The successful implementation of this document will help cities formulate a comprehensive and comprehensive

It is clear that the management system has been established and relevant parties are encouraged to take active actions.

The smooth implementation of this document can.

---Help to form and enhance a consensus on sustainable development in the city;

---Improve those strategies, plans, projects, plans and services that fall within the direct responsibility of the city or are carried out in its related areas

Sustainability, intelligence and resilience;

---Gradually form a cross-departmental, multi-disciplinary, life cycle value and total cost
