Standards for evaluating students' athletic ability in basketball courses

1 Scope

GB/T 43986-2024 is the Chinese national standard for evaluating a student's athletic ability in a basketball course, part of the Ministry of Education's family of school sport assessment standards. Basketball is the most played team sport in Chinese schools, and assessing it is harder than assessing an individual sport because much of the ability shows only in play; the standard handles that by combining measured skill tests with prescribed small-sided and full game assessments at the higher grades. It sets a six-grade classification with the attainment requirements for each level, and then the assessment for each grade in turn, with the test items, the court and equipment, the procedure and the scoring, progressing from the ball handling, passing, dribbling and shooting fundamentals of the lower grades through the individual offensive and defensive skills to the team tactical and match play requirements of the highest. The national criteria make grades comparable between schools and provinces. It took effect on 28 May 2024.

This document specifies the classification and achievement requirements of students' athletic ability in basketball courses, and describes the evaluation methods for each level. This document is applicable to the assessment of basketball athletic ability of students in primary school, junior high school, high school and university.

2 Normative references

The contents of the following documents constitute the essential clauses of this document through normative references in this document. For referenced documents without a date, only the version corresponding to that date applies to this document; for referenced documents without a date, the latest version (including all amendments) applies to This document.
