Foreword

This document is in accordance with the provisions of GB/T 1.1-2020 "Guidelines for standardization work Part

1. Structure and drafting rules for standardization documents" Drafting. Please note that some of the contents of this document may involve patents. The issuing organization of this document does not assume the responsibility for identifying patents. This document is submitted by the National Audit Office of the People's Republic of China. This document is under the jurisdiction of the National Audit Informatization Standardization Technical Committee (SAC/TC341). This document was drafted by: National Audit Office of the People's Republic of China, Computer Technology Center of National Audit Office, Special Commissioner's Office of National Audit Office in Zhengzhou, The National Audit Office's Special Commissioner's Office in Jinan, the National Audit Office's Special Commissioner's Office in Chengdu, the Audit Department of Zhejiang Province, the Audit Department of Anhui Province, the Audit Department of Fujian Province, Department of Accounting. The main drafters of this document are. He Jie, Ma Xiaofang, Yang Li, Cao Xi, Wang Zhong, Wu Xuan, Liu Zhibo, Lv Tianyang, Wei Lin, Fan Ying, Shan Yuanbo, Junlei Li, Binxiu Yao, Yi Lin,

Fangpeng Ye, Yongsheng Yu, Xuhui Chen, and Yueyi Song.

The meaning of "Finance" in the name of this document is "Finance" refers to finance and finance; "Economy" refers to economic activities. This document is dedicated to financial information technology. Standardization work on rural revitalization audit data interface in the field of rural revitalization. In recent years, big data has rapidly developed into a new generation of information technology and service industry that discovers new knowledge, creates new value, and enhances new capabilities. In 2019, the General Office of the CPC Central Committee and the General Office of the State Council issued the Digital Rural Development Strategy Outline. The Outline provides an important blueprint for the construction of digital villages. Promoting the construction of digital villages is not only the strategic direction of rural revitalization, but also the key to building digital villages. The financial subsidies in the field of rural revitalization involve a large amount of funds, many types, and a wide coverage. The effectiveness of rural revitalization audit has become an inevitable choice. At present, my country has not yet established a nationwide unified management information system in the field of rural revitalization. There are a large number of information systems independently planned and constructed by local governments and industries. The database structure is not completely unified, and there are large differences in data indicators and other contents. The drafting unit selected the two businesses with higher commonality, namely agricultural machinery purchase and application subsidies and agricultural insurance, to release the data interface first; others The audit data interface for the business will be released when conditions are ripe. The compilation of the rural revitalization audit data interface fills the gap in agricultural and rural audit information, and provides data collection for rural revitalization audit. and processing standards, meeting the basic needs of audit business, and also providing a reference for other regulatory departments, which is of great significance to improving rural revitalization in the information environment. The standardization and regularization of regulatory work has practical significance. Financial Information Technology Rural Revitalization Audit Data Interface

1 Scope

GB/T 44885-2024 specifies the audit data interface for rural revitalization in China. Rural revitalization is one of the largest public spending programmes in the country, distributed through subsidies and insurance schemes across every county, and auditing it means pulling data out of thousands of separate information systems built by different vendors at different times. A common interface is the only way that is tractable, and this standard defines it. The document sets the data elements and the rules for describing them, with a detailed list occupying most of fifty pages, the technical specification of the interface file including its format, its data structure, the output description and the timing requirements, and the conformity evaluation. Two informative annexes give the XML schemas and worked XML instances for two of the programmes, the agricultural machinery purchase and

application subsidy and agricultural insurance. For a software vendor serving Chinese local government, an audit body or anyone building an interface into these systems, this is the specification.

This document specifies the format requirements of the rural revitalization audit data interface, including data elements, data structure, data interface output files, Content and format requirements. This document is applicable to the design and application of electronic data in the field of rural revitalization required by national audit, internal audit and social audit. For reference by other departments in formulating data sharing requirements. This document applies to the fields involved in the rural revitalization audit data interface, see Table 1. Table
