Table of Contents

Preface
Introduction
1 Scope
2 Normative references
3 Terms and Definitions
4 Building a dementia-inclusive community
4.1 General
4.2 Systematic construction process
4.3 Process elements of a dementia-inclusive community
5 Guiding principles, outcomes and enabling factors
5.1 General
5.2 Key results for people with dementia and their caregivers
5.3 Favorable factors for a dementia-inclusive community
6 Integrated Community, Creating a Dementia-Inclusive Network
6.1 General
6.2 Comprehensive social network
6.3 People with dementia and informal care systems
7 Action Area, Multi-sectoral efforts to create a dementia-inclusive community
7.1 General
7.2 Areas of action to be addressed
7.3 Integration between action areas
7.4 Housing
7.5 Public Space
7.6 Public transportation
7.7 Businesses, shops, financial institutions, products and services
7.8 Infrastructure
7.9 Leisure, entertainment and social activities
7.10 Health and social care networks
7.11 Communities, Volunteers, Faith Groups and Organisations
7.12 Children, adolescents and students
7.13 Other sectors for specific target groups

Appendix A (informative) Factors that may need to be considered when implementing requirements

A.1 General

A.2 Housing - Possible considerations

A.3 Businesses, shops, financial institutions, products and services - possible considerations

A.4 Infrastructure - Possible considerations

A.5 Leisure - Possible considerations

A.6 Health and social care networks - possible considerations

A.7 Communities, Volunteers, Faith Groups and Organizations - Possible Considerations

A.8 Children, adolescents and students - possible considerations

Appendix B (Informative) Possible further considerations

B.1 General

B.2 Personalized care for the dementia-inclusive community

B.3 Consider innovation and technology-based approaches

B.4 Legal issues in caring for people with dementia

Appendix C (Informative) Stages of dementia and their impact on dementia inclusion community action areas

Appendix D (Informative) Other frameworks for consideration

Appendix E (Informative) Implementation and Progress Assessment Checklist

Reference

Foreword

This document is in accordance with the provisions of GB/T 1.1-2020 "Guidelines for standardization work Part 1: Structure and drafting rules for standardization documents" Drafting.

This document is an equivalent to ISO 25552:2022 "A framework for inclusive communities with dementia in an ageing society".

0.1 General

This document has been developed in response to worldwide recognition that individuals, families and communities need to be more inclusive of people with dementia.

The goal is to increase participation of people with dementia, their families and carers in communities of all types and sizes and in all locations.

The Dementia Inclusion Community is committed to working together to promote

understanding of dementia, reduce stigma, increase public awareness, and promote social inclusion.

By creating a dementia-inclusive environment, communities can support the independence of people with dementia and help them to be as inclusive as possible.

Provide opportunities for participation so that children can connect with others, feel safe and comfortable, and be able to perform to the best of their abilities.

0.2 Challenges and Solutions

The number of people with dementia is growing worldwide, which has led to an urgent need for all communities to understand dementia.

Discrimination against people with disabilities often occurs, becoming a barrier to diagnosis, treatment and care, which can seriously affect their quality of life.

Instead of providing adequate support for people with dementia, many communities prevent them from taking as much control over their lives as possible.

Providing additional support to people with cognitive impairment can help them continue to participate in daily activities and community life, or participate in decision-making in their lives, but currently this support is often provided too late or not at all.

To this end, it is necessary to educate people about the implications of a dementia diagnosis for people with dementia and those around them, including treatment and care.

This will help develop a dementia-inclusive community within an integrated care model.

NOTE Integrated care may include primary care, all professional health care providers such as occupational therapists, physiotherapists, social workers and dementia counsellors.

Creating supportive, safe and inclusive communities for people with dementia and their caregivers is essential to maximizing the lives of everyone.

Quality of life is crucial.

This document provides a comprehensive, interdisciplinary framework for building dementia-inclusive communities.

In addition, this document recognizes that factors such as training, resources, experience, availability of personnel, and existing organizational structures directly affect cognitive. Therefore, this document provides a guide on how to identify and implement dementia-inclusive community planning and implementation.

and addressing these constraints.

People with dementia may face physical, sensory, cognitive, social, and communication challenges, all of which need to be addressed as part of dementia inclusion.

ISO/IEC Guide 71 provides information on various human capabilities and characteristics that are relevant to this document.

0.3 Expected results and target audience of the document

Expected results from using this document include.

- Improve the quality of life for all people with dementia in the community;
- Improve the quality of services for people with dementia;
- Enhance the ability of the dementia-inclusive community to gain recognition;
- Optimize the resources needed to develop a dementia-inclusive community;
- Create new opportunities for all stakeholders in the dementia-inclusive community;
- A more inclusive community that promotes and encourages participation by everyone, including people with dementia.

Users of this document include but are not limited to.

- Community management department;
- Organizations, groups and community groups;
- Individuals, caregivers and families;
- People interested in relevant education, research and development;
- Decision makers;
- Planners, designers and providers of products, services, built environment and community infrastructure.

0.4 Other requirements

There may be other requirements, including regulatory requirements that may affect aspects of the dementia-inclusive community described in this document (e.g., revocation of regulations on driver's licenses and regulations that restrict the free movement and decision-making of people with dementia in their later years). Therefore, those who create dementia-inclusive communities need to identify potential regulatory, health and other requirements that may conflict with the creation of a dementia-inclusive community and discuss how these can be addressed or mitigated.

conflict.
