Foreword

This document is in accordance with the provisions of GB/T 1.1-2020 "Guidelines for standardization work Part 1: Structure and drafting rules for standardization documents" Drafting.

This document is Part 4 of GB/T 45963, Digital Government Architecture Framework. GB/T 45963 has been published in the following parts.

- Part 1: Reference model;
- Part 2: Architecture design;
- Part 3: Governance;
- Part 4: Competence assessment;
- Part 5: Information exchange model.

Please note that some of the contents of this document may involve patents. The issuing organization of this document does not assume the responsibility for identifying patents.

This document was proposed and coordinated by the National Technical Committee for Information Technology Standardization (SAC/TC28).

This document was drafted by: China Electronics Technology Standardization Institute, China Electronics Wanwei Information Technology Co., Ltd., Huawei Technologies Co., Ltd.

Department of Government Services and Data Management of Guangdong Province, E-government Center of General Office of People's Government of Fujian Province, Government Big Data Center of Henan Province, Jiangsu Province Provincial Big Data Management Center, Shanghai Putuo District Data Bureau, Beijing Haidian District Data Bureau, Tai'an Administrative Approval Service Bureau, Yuhang District Data Bureau Resource Management Bureau, Nanwei Software Co., Ltd., Beijing Beidasoft Information Technology Co., Ltd., China Electronics Science and Technology Big Data Research Institute Co., Ltd., Beijing Huayu Information Technology Co., Ltd., China Electronics Rice Information Systems Co., Ltd., Shanghai Digital Industry Development Co., Ltd., National Public Credit and Space Information Center, H3C Technologies Co., Ltd., Tsinghua University, Digital Guangdong Network Construction Co., Ltd., Fujian Big Data Group Quanzhou Co., Ltd., China Telecom Digital Technology Co., Ltd., FiberHome Technologies Co., Ltd., Beijing Telecom Planning and Design Institute Co., Ltd., Hangzhou Amber Data Technology Co., Ltd.

The main drafters of this document are: Ma Guanghui, Liang Zhaoxia, Peng Gefei, Wei Chenjiang, Chen Liujia, Xia Yong, Wang Yansheng, Yu Hao, Rui Wei, Qi Wenhui, Lin Wenhe, Wang Wuying, Zhang Kai, Tian Yongyan, Wu Shuangli, Wan Xiaolan, Long Weichao, Teng Xicheng, Liu Jie, Cui Hao, Peng Wuyang, Li Xiaoqing, Chen Gang, Chen Yang, Wang Youkui, Lin Limin, Han Guoquan, Zhao Yue, Wang Hanbing, Mei Qiuhe, Zhou Xu, Zhang Yi, and Guo Shucheng.

Introduction

Digital government is an important part of digital transformation. The in-depth application of digital technology and the extensive construction of various systems have increased the digital government's complexity. The complexity of digital government is that it takes overall planning, overall coordination, interconnection and intensive construction as its development content and characteristic requirements. Therefore, the application of The need to recognize, understand and guide the entire process of digital government through systematic thinking is becoming increasingly prominent.

The top-level design of the government can not only promote the organic integration of technical elements, but also help promote the formation of collaborative consensus among multiple subjects and resource allocation. Improved efficiency.

GB/T 45963 "Digital Government Architecture Framework" aims to provide a conceptual approach for the top-level design of digital government and enhance the overall, scientific and continuous nature of the planning will help digital government planners, designers, developers and builders to establish a unified understanding and form a Provides overall guidance for digital government planning. In actual application, it can be selected and tailored according to specific situations and actual needs.

GB/T 45963 is intended to consist of five parts (as shown in Figure 1).

- Part 1: Reference Model. The purpose is to provide the content and design process of the top-level design of digital government in the organizational dimension, and to provide a reference for the implementation of digital government.

It provides unified reference and direction guidance for the government's coordinated planning and overall planning.

- Part 2: Architecture Design. The purpose is to provide the architecture design of government digital projects in the engineering dimension under the guidance of the reference model.

Design methods and architecture design processes are used to guide how to carry out the overall planning of government digital projects.

- Part 3: Governance. The purpose is to standardize the elements of control over the various contents of the top-level design of digital government under the governance

dimension.

The composition, mutual relations, specific requirements, etc. provide various supports and guarantees for the smooth implementation of the top-level design of digital government.

- Part 4: Capacity Assessment. The purpose is to conduct maturity analysis and Judge, establish the basis and level of evaluation, and provide a path for continuous improvement for the top-level design capabilities of digital government.

- Part 5: Information Exchange Model. The purpose is to provide the extended content and specific application of the data reference model, and to specify the cross-border The requirement for formal description of information resources in the context of domain information exchange is to promote cross-domain common understanding and collaboration of data. Figure 1 GB/T 45963 structure Digital Government Architecture Framework Part 4: Capacity Assessment

1 Scope

This document clarifies the content of capability assessment in the digital government framework, provides capability assessment domains and assessment items, and divides capability maturity into The capability maturity level specifies the capability maturity level characteristics.

This document is applicable to the assessment of the ability to carry out top-level design using the digital government architecture framework.

3 Terms and Definitions

The following terms and definitions apply to this document.

3.1 capability assessment capability assessment

Measure, analyze, and evaluate the capabilities of implementing the digital government architecture framework at different levels and states.

3.2 assessmentdomain

A collection of assessment items for conducting competency assessments.
