What this standard covers

This standard specifies the reciprocating internal combustion (RIC) driven generating sets of technical conditions and design requirements. This standard applies to the land and marine reciprocating internal combustion (RIC) driven alternating current (ac) generator sets. NA air or land vehicles and locomotives driven generator sets. For some special purposes (such as hospitals, electricity and other high-rise buildings) generator sets, it is necessary to make some additional requirements. The relevant provisions of this standard can be used as foundation. In other type of prime mover (such as biogas engines, steam engines, etc.), the relevant provisions of this standard should also be as a basis.

Document data

International classification (ICS): 27.020.

Chinese classification (CCS): J91.

Estimated length of the Chinese original: 5,510 words.

Adopted international standard: ISO 2261-1994, IDT.

Supersedes the earlier edition GB/T 4672-1984.
