Network security technology identification password authentication system Cryptography and related security technical requirements

1 Scope

GB/T 46798-2025 is the Chinese national standard covering identity-based cryptography - where a public key is derived from the identity itself, so no certificate is needed, at the cost of a key generation centre that can compute every private key and therefore must be protected accordingly. At 26,000 words, first edition, with the public key framework GB/T 46795-2025. Issued on 2 December 2025, it has been in force since 1 July 2026.

This document specifies the security and technical requirements for services such as key generation, management, and public parameter querying in the identification cryptographic authentication system. This document applies to the design, development, use, and testing of identification and password authentication systems.

2 Normative references

The contents of the following documents, through normative references within the text,

constitute essential provisions of this document. Dated citations are not included. For references to documents, only the version corresponding to that date applies to this document; for undated references, the latest version (including all amendments) applies. This document.

3 Terms and Definitions

The terms and definitions defined in GB/T 38635-2020 (all parts) and GB/T 25069, as well as the following terms and definitions, apply to this document.

3.1 Authentication The process of verifying the identity or attributes claimed by an entity.

3.2 Identity Information that can uniquely identify an entity and is undeniable. Note

1.Data in this document is identified as conforming to the Identifier definition in GM/T 0090-2020. Note

2.In GM/T 0090-2020, the identityData of the Identifier is the entity's identifiable name, email address, ID card number, telephone number, and device code. Number, street address, etc. [Source: GB/T 38635.1-2020, 3.1, with modifications]
