Foreword

GB/T 48058-2026 is a recommended national standard (GB/T) of the People's Republic of China, issued on 28 August 2026 by the State Administration for Market Regulation and the Standardization Administration of China, with effect from 1 March 2027.

The document adopts an international standard (ISO or IEC).

It is under the responsibility of the National Forestry and Grassland Administration.

Classification: ICS 97.150; CCS B 70.

1 Scope

This standard specifies a test method for determining residual indentation of laminate floorings. Residual indentation describes the lasting mark left in a floor surface after a load has been applied and removed, and it is one of the ways the surface durability of laminate flooring is assessed. It adopts an international standard.

The users include laminate flooring manufacturers, product development and quality control staff, independent test laboratories, flooring importers and distributors, and buyers who compare product performance. A standardized method lets different laboratories measure the property in the same way and produce comparable results, which matters when a supplier's claim is checked by a customer's laboratory.

It is a recommended (GB/T) standard, so it is voluntary unless required by contract or by a product specification. Laboratory personnel should consult the full text for the apparatus and procedure. It was issued on 28 August 2026 and takes effect on 1 March 2027.
