Foreword

GB/T 48128-2026 is a recommended national standard (GB/T) of the People's Republic of China, issued on 28 September 2026 by the State Administration for Market Regulation and the Standardization Administration of China, with effect from 1 April 2027.

It is under the responsibility of the China Machinery Industry Federation.

Classification: ICS 65.060.99; CCS B91.

1 Scope

Shiitake mushroom sticks are the substrate bags or logs in which this widely cultivated edible fungus is grown, and this standard covers the complete set of automatic production equipment used to make them. It is directed at manufacturers of agricultural and edible-fungus machinery, at large mushroom growers and cooperatives planning mechanised lines, and at buyers, engineers and inspectors who must specify or accept such equipment.

By treating the line as a complete set rather than as separate machines, the document gives suppliers and purchasers a shared reference when discussing what a production installation should consist of. It was issued on 28 September 2026 and takes effect on 1 April 2027. The standard is a recommended national standard administered by the China Machinery Industry Federation. Our records show no earlier edition replaced by it, so it reads as a new reference in a sector where automation has been growing, and it is relevant to anyone supplying or purchasing equipment for edible-fungus production in China.
