Foreword

GB/T 48230.8-2026 is a recommended national standard (GB/T) of the People's Republic of China, issued on 28 September 2026 by the State Administration for Market Regulation and the Standardization Administration of China, with effect from 1 April 2027.

The document adopts an international standard (ISO or IEC).

It is under the responsibility of the Ministry of Housing and Urban-Rural Development.

Classification: ICS 91.080.40;13.020.10;91.100.30; CCS P 25.

1 Scope

This part of the GB/T 48230 series covers environmental labels and declarations as they apply to concrete and concrete structures. Producers of concrete and concrete products, material suppliers, developers, and procurement teams are the likely users, since labels and declarations are how environmental information about a product or structure is communicated to buyers and regulators.

The document belongs to the wider family on environmental management for concrete and concrete structures. It adopts an international standard and is a recommended national standard (GB/T), so it is voluntary unless adopted by contract or referenced by a program. It was issued under the Ministry of Housing and Urban-Rural Development.

For companies that sell concrete-related products in China, or that must document environmental performance for green building schemes and tenders, it offers a defined framework to follow. It becomes effective on 1 April 2027.
