Foreword

GB/T 48336.101-2026 is a recommended national standard (GB/T) of the People's Republic of China, issued on 28 September 2026 by the State Administration for Market Regulation and the Standardization Administration of China, with effect from 1 April 2027.

It is under the responsibility of the Standardization Administration of China.

Classification: ICS 35.100; CCS L79.

1 Scope

Part 101 of the SparkLink wireless communication system series presents the architecture and general requirements of the system. SparkLink is a short-range wireless technology developed in China, and this part serves as the framing document for the series, describing how the system is organized and what applies across it. Chip designers, module makers, device manufacturers, protocol software developers and test laboratories use such a part to understand the overall structure before turning to the more detailed parts.

The standard is recommended rather than mandatory, was issued on 28 September 2026 and takes effect on 1 April 2027. It was released under the national standardization authority. No predecessor is recorded. Companies planning products for the Chinese consumer electronics, automotive or industrial wireless markets, and those tracking domestic alternatives to established short-range radio technologies, should read it together with the other parts of the series that deal with specific layers and devices.
