What this standard covers

This standard specifies requirements for cargo transport packages and single frequency sinusoidal vibration test conducted using the test equipment when the main performance requirements, test procedures and test reports. This section applies to a single assessment of transport packages and cargo sinusoidal frequency vibration or resonance in the case of packaging on the strength and ability to protect the contents. Either as single test can be used as part of a series of tests.

Document data

International classification (ICS): 55.020.

Chinese classification (CCS): A83.

Estimated length of the Chinese original: 7,778 words.

Adopted international standard: ISO 8318-2000, MOD.

Supersedes the earlier edition GB/T 4857.10-1992.
