What this standard covers

This standard specifies the mica paper with a single layer of polyester film composite and mica paper impregnated with epoxy resin made of electrically insulating material performance requirements. Products supplied soft state, which contains B-stage resin by use after the final cure. Delivery mode can be sheets or rolls. This part of the performance of the product covered by the thickness of 0.16 ~ 0.23mm. In line with the part of the material, to meet certain performance levels. However, for a specific application, the material should be based on the application of the individual performance requirements needed to choose, rather than solely on the portion to be.
