What this standard covers

This Standard specifies the sample was measured with a rectangular or sintered metal material after sintering method of transverse rupture strength. This Standard is applicable to the entire cross section of uniform hardness, ductility minimum (permanent deformation between the two points is less than about 0.5mm) of sintered metal materials. This standard also applies to a number of sintered metal powder sintering intensity and strength powder reference or reference comparison test between strength. This method does not apply to carbide.

Document data

International classification (ICS): 77.040.10.

Chinese classification (CCS): H71.

Estimated length of the Chinese original: 7,798 words.

Adopted international standard: ISO 3325-1996, IDT.

Supersedes the earlier edition GB/T 5319-1985.
