What this standard covers

This standard specifies the bending roller chain dimensions, tolerances, measurement of tensile load and minimum load, but also provides the alveolar shape to match the chain sprocket tooth profile and axial. This standard applies to applications in the heavy conditions, for power, mechanical transmission with a bending roller chain. Specified in the standard size ensures that the chain of the same size throughout the chain, the chain is compatible use, and in the maintenance of the individual links of the chain can be interchangeable.

Document data

International classification (ICS): 21.220.30.

Chinese classification (CCS): J18.

Estimated length of the Chinese original: 11,195 words.

Adopted international standard: ISO 3512-1992, IDT.

Supersedes the earlier edition GB 5858-1986.
