What this standard covers

This standard specifies the measurement of non-electric hand-held power tools class noise emission values ??, identifying and labeling methods. Under the following provisions of the load and operating conditions of the project can be measured, a) under the provisions of the noise radiation loading conditions, with the sound power level, said, b) Under the provisions of loading conditions, radiation SPL working position. This standard applies to the typical hand-held non-electric power tools, including rotary tool, There is no track and trace grinder, brought forward and not back to the turn of reciprocating and impact tools and a variety of assembly tools. This standard does not apply to ammunition -driven tool, gripping driven tools (such as automatic nailing machines, stapler, etc.) as well as all the tools powered by internal combustion engines, does not apply to the crusher or required to meet the terms of the statutory test methods and sell of, and noise radiation to other power tools mandatory limit, for example, the use of outdoor equipment.

Document data

International classification (ICS): 17.140.20.

Chinese classification (CCS): J04.

Estimated length of the Chinese original: 24,268 words.

Adopted international standard: ISO 15744-2002, IDT.

Supersedes the earlier edition GB/T 5898-2004.
