What this standard covers

This standard specifies: bimetal thermal elastic modulus formula, test equipment requirements, test methods for sample preparation and other factors. This standard applies to: thickness 0.40 ~ 1.40mm heat bimetallic strip specimen, between -185 ~ +540 °C certain temperature flexibility determination. This standard does not purport to mention all safety problems, even if there is this standard the use of the. Before using, equipment properly security measures and determine standards Applicability, are the standard user responsibility.

Document data

International classification (ICS): 77.040.10.

Chinese classification (CCS): H21.

Estimated length of the Chinese original: 8,834 words.

Adopted international standard: ASTM B223-1985 (1991); MOD.

Supersedes the earlier edition GB/T 5986-1986.
