What this standard covers

This standard specifies the use of dithizone spectrophotometric determination of cadmium in water and wastewater. Sample Type: This standard applies to the determination of the natural trace cadmium in water and waste water. See Appendix interference issues related to A. Scope: This standard applies to the determination of the concentration of cadmium in the range of 1 ~ 50?g/L, the cadmium concentrations higher than 50?g/when appropriate dilution of the sample can then be determined. The detection limit

Document data

International classification (ICS): 13.06.

Chinese classification (CCS): Z16.
