What this standard covers

This standard specifies the user in the information processing system of information exchange between the paper tape structure and labeling. This standard also provides for: Volume and file structure, block basic features (these blocks constituting the file that contains the records), identifies the tape file, the file record segment and volume label, four nested levels of interchange. In addition, the standard specifies the information processing system is provided with the following requirements for use in the process: allowing information to be exchanged in the use of media as a recording tape exchanged between different systems. To this end, for those who intend to comply with this standard built or receiving tape volume systems, this standard provides these systems to provide functionality.

Document data

International classification (ICS): 35.220.22.

Chinese classification (CCS): L75.

Estimated length of the Chinese original: 27,296 words.

Adopted international standard: ISO 1001-1986, IDT.

Supersedes the earlier edition GB/T 7574-1987.
