What this standard covers

This standard specifies: Determination of aluminum and aluminum anodic film mass per unit area (surface density) with mass loss method, and to estimate the average thickness of the oxide film methods. This standard applies to: copper content of not more than 6 percent cast or wrought aluminum and aluminum alloys to generate all anodic oxide film.

Document data

International classification (ICS): 25.220.40.

Chinese classification (CCS): H25.

Estimated length of the Chinese original: 6,652 words.

Adopted international standard: ISO 2106-1982; MOD.

Supersedes the earlier edition GB/T 8015.1-1987.
