What this standard covers

This standard specifies: a color difference between the two samples of the same material in the same condition calculation methods. Total color difference ΔE (cmc) (l: c) quantifiable two colors do not match the level of the sample size. It allows a maximum deviation range (tolerance), This tolerance Technical Specifications only depend on the final use requirements closely matched, while involved with independent of the nature color and color. The method also provides for determining the lightness difference, chroma difference and the difference in tone methods.

Document data

International classification (ICS): 59.080.01.

Chinese classification (CCS): W04.

Estimated length of the Chinese original: 10,194 words.

Adopted international standard: ISO 105-J03-1995; MOD.
