What this standard covers

This standard specifies the test method for determining the sensitivity of color reversal photographic film, including testing principles, instrumentation, sampling, exposure and washing, general requirements density measurement, calculation methods and so on. This standard applies to the determination by observation or photographic slides for daylight-type color reversal film and lights on the projector sensitivity. This standard does not apply to use of color reversal film sensitivity measurement.

Document data

International classification (ICS): 37.040.20.

Chinese classification (CCS): G80.

Estimated length of the Chinese original: 14,148 words.

Adopted international standard: ISO 2240-1982, MOD.
