What this standard covers

This standard specifies: Determination of lead content in rubber using atomic absorption spectrometry method. This standard applies to: raw rubber, rubber compound and rubber products. For lead without measuring the concentration limit. As long as the appropriate adjustments samples or the amount of solution can be measured concentrations higher or lower concentrations. With the standard addition method can reduce the measurement the lower limit.

Document data

International classification (ICS): 83.060.

Chinese classification (CCS): G40.

Estimated length of the Chinese original: 7,731 words.

Adopted international standard: ISO 6101-2-1997; MOD.

Supersedes the earlier edition GB/T 9874-1988.
