Foreword

This document complies with the provisions of GB/T 1.1-2020 "Standardization Work Guidelines Part 1: Structure and Drafting Rules of Standardization Documents". Drafting.

This document adopts the same standards as ISO /T S42501.2022 "General requirements for reliability and security of digital platforms in the sharing economy".

Introduction

The widespread use of the internet, technological development, economic model innovation, and demographic changes have combined to lead to the emergence of a new economic model.

This new economic model is often referred to as the "sharing economy," which enables individuals and/or organizations that were previously unconnected to conduct transactions.

The sharing economy creates opportunities to connect individuals or organizations with idle assets or skills with those who wish to use them.

The sharing economy enables services and products to reach more consumers, supports entrepreneurship, and creates new business opportunities through flexible work arrangements.

Through this new model, sharing assets instead of owning them can optimize their use. The sharing economy is expected to create [something] by providing products or [other services]. Opportunities to improve society and the environment.

Furthermore, the sharing economy may not be able to provide the same level of security, service quality, and reliability as traditional business models.

These potential flaws could harm not only resource users but also the level playing field for resource providers.

This document aims to build a more acceptable and trustworthy digital ecosystem by supporting the governance activities of both for-profit and non-profit platform operators. Operation of the word platform.

1 Scope

This document specifies general requirements for the reliability and security of digital platforms.

This document is intended for operators of digital platforms in the sharing economy. While this document does not cover the system requirements for digital platforms, it does provide guidance on system development. It can still be helpful.

2 Normative references

The contents of the following documents, through normative references within the text, constitute essential provisions of this document. Dated citations are not included.

For references to documents, only the version corresponding to that date applies to this document; for undated references, the latest version (including all amendments) applies. This document.

ISO 42500 General principles of the sharing economy

3 Terms and Definitions

The terms and definitions defined in ISO 42500 and the following terms and definitions apply to this document.
