Production technical practice for garlic

大蒜生产技术规范

Issued on: June 16, 2011

Implemented on: June 16, 2011

**Issued by: State Administration for Market Regulation;
Standardization Administration of China**

Table of Contents

Foreword	I
1 Scope	1
2 Normative references	1
3 Selection and management of the production base	1
3.1 Selection of the production base	1
3.2 Management of the production base	1
3.2.1 Working room	1
3.2.2 Store of the base	1
3.2.3 Washing room	1
3.2.4 Facilities for collecting waste and pollutants	1
3.2.5 Irrigation system	1
3.2.6 Plant protection officer	1
4 Management of the production inputs	2
5 Cultivation management	2
5.1 Land preparation and fertilization	2
5.1.2 Bed preparation	3
5.1.3 Base fertilizer	3
5.2 Selection of the planting material	3
5.2.1 Choice of variety	3
5.2.2 Quality of the seed garlic	3
5.3 Sowing	3
5.3.1 Treatment of the seed garlic	3
5.3.2 Sowing time	3
5.3.3 Sowing method and sowing density	3
5.4 Field management	3
5.4.1 Management of the seedling stage	3
5.4.2 Management during the elongation of the garlic scape	4
5.4.3 Management during the swelling of the bulb	4
5.5 Harvesting and post-harvest handling	4
5.5.1 General requirements	4
5.5.2 Harvesting of the garlic scape	4
5.5.3 Harvesting of the garlic bulb	4

5.5.4 Management of the garlic bulb	4
5.5.5 Cleaning the field	4
5.5.6 Packaging materials	4
6 Control of pests and diseases	4
6.1 Principles of control	4
6.2 Main targets of control	4
6.3 Control measures	4
6.3.1 Agricultural control	4
6.3.2 Physical control	4
6.3.3 Chemical control	5
7 Labour protection	5
7.1 Training	5
7.2 Protection during pesticide application	5
7.3 Warnings	5
8 Batch management	5
9 Record keeping	5
Annex A (normative) Production record forms	6
Annex B (normative) Control scheme for the main pests and diseases of garlic	18

Foreword

Appendix A and Appendix B to this Guidance Document are normative appendices. The guidance of technical documents proposed by the General Administration of Quality Supervision, Inspection and Quarantine. The guidance of technical documents by the China National Institute of Standardization. The drafting of this technical guidance unit Shandong Provincial Plant Protection Station, the General Administration of Quality Supervision, Inspection and Quarantine International Inspection and Quarantine standards And technical regulations Research Center, Plant Protection Station in Linyi City, Plant Protection Station in Cangshan County, Plant Protection Station in Chengwu County. The main drafters of this Guidance Document are. Jian Jian, Pu Min, Li Ming Li, Lu Lu, Song Shu'e, Ge Xiu Ting, Zhang Fu Yuan, Liu Huai Hai. Garlic production technical specifications

1 Scope

This guiding technical document specifies the basic requirements for the production of garlic, covering mainly the selection and management of the production base, the management of production inputs, cultivation management, pest control, labour protection, batch management and record keeping. This guiding technical document applies to the

production of garlic.

This guideline technical documents stipulate the basic requirements of garlic production, including the selection and management of production bases, production inputs Management, cultivation and management, pest control, labor protection, batch management, archival records and so on. This guideline is applicable to the production of garlic.

2 Normative references

The following documents contain provisions which, through reference in this Guidance Document, become the provisions of this Guidance Note document. All dated Reference documents, all subsequent amendments (not including errata content), or revisions do not apply to this guidance document, however, drums Recipients of the agreement based on this guidance document are encouraged to study whether the latest versions of these documents are applicable. All undated references The latest version of this document applies to this guidance document.

GB/T 8321 (all parts) Guidelines for the rational use of pesticides

GB/T 18407.1 Quality and safety of agricultural products Environmental pollution-free vegetables origin requirements

3 Production base selection and management

3.1 production base selection Environmental conditions of the production base should be consistent with the requirements of GB/T 18407.1, and fill out the "basic record of production base" (see Table A.1) And "record of existing species survey of production base" (see Table A.2). Should choose flat topography, irrigation and drainage convenience, deep soil, loose soil Fertile, good physical and chemical properties, the first 2 years to 3 years without planting onion, garlic and other lily crops loam plots. The production base should be far away from pollution sources. Contiguous area should be more than 3hm².

3.2 production base management

3.2.1 studio Production base should have a studio. Indoor equipped with tables and chairs, information cupboard, etc., placed on the production management record list, posted production technology regulations Fan, pest control safety medication standards list, base management and input management and other relevant rules and regulations.

3.2.2 base warehouse The production base should be built with a dedicated warehouse, separate storage facilities for pesticides and unused seeds (seedlings), pesticides, fertilizers and so on. Warehouse should be safe, Wei Health, ventilation, dark, built-in shelves, equipped with the necessary measurement of pesticides, protective clothing, first aid kit, etc., and fill in the "production base of major agricultural equipment (Tools)

Registration Form "(see Table A.3).

3.2.3 bathroom Production base should be equipped with toilets, indoor sanitation.

3.2.4 Waste and pollutant collection facilities Production base should be equipped with garbage collection and empty packaging of pesticides and other waste and pollutants facilities.

3.2.5 Irrigation system Production base should establish a separate irrigation and drainage management systems, such as storage tanks, water supply channels, irrigation equipment. Well water well wellhead should be above the ground 30cm above, and is equipped with protective equipment to prevent rainwater intrusion and abandonment of pollutants.

3.2.6 Plant Inspectors Production base should be equipped with plant protection staff, responsible for the prevention and control of pests and diseases, pesticide use management and records. Plant protection equipment should be equipped with the number of each A base production needs, and fill out the "basic record of production base" (see Table A.1) and "production base registration form" (see Table A.4). NPPOs should be certified as NPPOs and trained in Integrated Pest Management (IPM).
