Foreword

GB/Z 45288.7-2026 is a national guiding technical document (GB/Z) of the People's Republic of China, issued on 27 August 2026 by the State Administration for Market Regulation and the Standardization Administration of China.

It is under the responsibility of the Standardization Administration of China.

Classification: ICS 35.240; CCS L70.

1 Scope

Speech is one of the main modalities for large artificial intelligence models, and this document addresses it as Part 7 of the series on large-scale models, with the subject of speech large-scale models. It is a guiding technical document, so it gives guidance and does not set mandatory requirements. Its number shows that it belongs to the same numbered family as the earlier parts of the series, which deal with other aspects of large models.

Developers of speech recognition, speech synthesis and voice interaction systems, vendors of large model platforms, and enterprises that integrate voice capabilities into products and services can use it as a reference. Evaluators and procurement teams may rely on it to describe what is expected of a speech model in consistent terms. The document was issued on 27 August 2026 by the national standardization administration. Readers who work with Chinese-language speech technology or who need to understand the national approach to organizing standards for large models by modality will find it a relevant part of the series.
