Foreword

This document is a standard or guiding technical document.

This document complies with the provisions of GB/T 1.1-2020 "Standardization Work Guidelines Part 1: Structure and Drafting Rules of Standardization Documents".

Drafting.

Please note that some content in this document may involve patents. The issuing organization of this document assumes no responsibility for identifying patents.

This document was proposed and is under the jurisdiction of the China National Institute of Standardization.

1 Scope

This document specifies the basic architecture, equipment configuration, deployment plan, and security requirements for the Internet health service network.

This document applies to the construction of internet-based health service networks.

2 Normative references

The contents of the following documents, through normative references within the text, constitute essential provisions of this document. Dated citations are not included.

For references to documents, only the version corresponding to that date applies to this document; for undated references, the latest version (including all amendments) applies.

This document.

GB/T 22239 Information Security Technology - Basic Requirements for Network Security Level Protection
GB/T 35273 Information Security Technology - Personal Information Security Specification
GB/T 35276 Information Security Technology - Specification for the Use of SM2 Cryptographic Algorithm
GB/T 38645 Information Security Technology - Guidelines for Emergency Drills for Cybersecurity Incidents
GB/T 39725 Information Security Technology - Guidelines for Health and Medical Data Security

3 Terms and Definitions

The following terms and definitions apply to this document.

Healthcare-related services provided through internet platforms.

A network used to enable interaction and collaboration in internet-based health services.

service provider

Entities that provide services to service recipients, including healthcare institutions and other service providers.

service recipient

Individuals or organizations that receive internet health or other services from service providers.

Service Access Network an edge network that connects internet health service terminals to the service backbone network is used to enable access to internet health services.

The core network connects multiple Internet health service access networks and is used to implement global routing for Internet health services.
