### What this standard covers

This standard specifies the main characteristics of digital audio broadcasting transmission systems operating in the FM band that comply with GY/T 268.1?2013 (hereinafter referred to as "the system"). It provides guidance on establishing broadcast transmission networks compliant with GY/T 268.1?2013, covering aspects such as transmission parameter settings, basic descriptions of multi-frequency network (MFN) and single-frequency network (SFN) structures, antenna-feeder system setup, and program signal distribution networks. This document applies to the design, development, construction, testing, and operation and maintenance of systems compliant with GY/T 268.1?2013, as well as to the establishment and operation of FM-band digital audio broadcasting transmission networks.

### Document data
