1 Foreword

HB 7716.18-2022 was issued by Ministry of Industry and Information Technology of the People's Republic of China on 8 April 2022 and has been in force since 1 October 2022.

It is one of 3 parts of the HB 7716 series.

The HB prefix, without a suffix, marks a mandatory standard: within its scope, compliance is required.

2 Scope Preview

This standard specifies the reagents, instruments, sampling and sample preparation, analysis steps, calculation of analysis results, tolerances and quality control and requirements for the determination of lithium and lead content in titanium alloys by inductively coupled plasma atomic emission spectrometry. This standard is applicable to the determination of lithium and lead content in titanium alloys. The measured mass fraction range is 0.001% to 0.20%.

HB 7716.18-2022 carries no ICS number and no Chinese Standard Classification code.

This catalogue holds 171 other HB standards.

Of the 65 HB standards that do carry an ICS number, 65 (100%) fall under ICS 49, in the field of aircraft and space vehicle engineering.

3 About this standard

Sector: Aviation Industry Standard

Issued by: Ministry of Industry and Information Technology of the People's Republic of China

English translation: about 15 pages (approximate)

4 Related standards

Other parts of this standard:

HB 7716.16-2022 - Part 16: Determination of platinum and palladium content by inductively coupled plasma atomic emission spectrometry

HB 7716.17-2022 - Spectral analysis methods for chemical composition of titanium alloys - Part 17: Determination of boron content by inductively coupled plasma atomic emission spectrometry

Standards on related subjects:

JB 2293-1978 - Wind tunnel test method of radiator of automobile and tractor

5 Classification and status

Prefix HB: mandatory standard.
