What this standard covers

This standard applies to chemical powder Packing measurement accuracy and test methods for fertilizers, plastics, soda, detergents, dyes, fine chemicals and other chemical particles in the production process of packaging equipment selection and testing, may be used as chemical production facilities to implement quality sampling and testing of packaging systems assessment based on process performance. This standard does not apply to packaging equipment, measuring instruments (such as electronic scales, mechanical scales, etc.) of the test. Packaging equipment on the measurement scales must comply with " automatic gravimetric filling weighing test procedures" (latest edition) requirements. Without the " order" test and by the test does not meet the "order " requirement of measurement scales, the product shall not be used in chemical powder packaging equipment.

Document data

International classification (ICS): 71.010.

Chinese classification (CCS): G08.

Estimated length of the Chinese original: 15,177 words.

Supersedes the earlier edition HG/T 20547-1992.
