Foreword

HG/T 3952-2026 is a recommended industry standard of the People's Republic of China in the Chemical Industry sector, approved and issued by the Ministry of Industry and Information Technology on 15 July 2026, with effect from 1 February 2027.

This edition replaces HG/T 3952-2007.

It is administered by the National Technical Committee for Paint and Pigment Standardization.

Classification: ICS 87.040; CCS G51.

1 Scope

HG/T 3952-2026 is the Chinese chemical industry standard for electrodeposition coatings, that is, coating materials that are applied to a conductive object by electrodeposition in a bath. The document sets out the technical provisions for this class of product so that coating producers and their customers can describe, test and accept it in a consistent way. The English translation covers the full text of the Chinese original.

The standard is intended for manufacturers of electrodeposition coatings, paint testing laboratories, and industrial users who buy these coatings for their finishing lines and need a common reference for supply agreements. Its code carries the /T suffix, so it is a voluntary industry standard rather than a mandatory one. The Ministry of Industry and Information Technology approved it on 15 July 2026, and it comes into force on 1 February 2027, when it replaces the earlier edition, HG/T 3952-2007.
