What this standard covers

This standard specifies the method for determining the combustion performance of catalytic cracking catalysts using the carbon monoxide index method. This standard is applicable to the determination of carbon monoxide index in various additives such as catalytic cracking catalysts, catalytic cracking catalyst main agents, combustion aids, and combustion denitrification agents. The measurement range is 1.23% to 87.46%. This method can also be used to measure beyond this range, but the precision has not been investigated.

Document data

International classification (ICS): 71.100.99.

Chinese classification (CCS): G74.

Estimated length of the Chinese original: 9,956 words.
