What this standard covers

This standard specifies the technical requirements, test methods, inspection rules, marking, packaging, transportation and storage, and accompanying documents for catalytic cracking light olefin promoters. This standard applies to catalytic cracking light olefin promoters produced by semi-synthetic methods. The products are suitable for catalytic cracking units that increase the concentration of light olefins in liquefied gas (mainly to increase the production of propylene), and can be mixed with other catalytic cracking catalysts to increase the yield and concentration of light olefins in liquefied gas.

Document data

International classification (ICS): 71.100.99.

Chinese classification (CCS): G75.

Estimated length of the Chinese original: 13,135 words.
