What this standard covers

This standard specifies the overall requirements for the regeneration process of deactivated denitrification catalysts, the technical requirements for pollution control in the regeneration process, the requirements for pollutant discharge control and the management requirements for the operating environment. This standard is applicable to the pollution control of deactivated denitrification catalyst regeneration process in thermal power plants, and can be used as a technical reference basis for environmental impact assessment of deactivated denitrification catalyst regeneration construction projects, design of environmental protection facilities, acceptance of completed environmental protection facilities, and application and issuance of pollutant discharge permits . Other industries or types of deactivated denitrification catalyst regeneration pollution control can refer to this standard.

Document data

Chinese classification (CCS): Z05.

Estimated length of the Chinese original: 8,810 words.
