What this standard covers

This standard specifies the pollutants and pollution loads, general requirements, process design, main process equipment, testing and process control, main auxiliary projects, labor safety and occupational health, construction, operation and maintenance of contaminated soil solidification/stabilization projects. Require. This standard is applicable to the construction and operation management of contaminated soil solidification/stabilization treatment projects, and can be used as a reference for engineering design, construction, operation and maintenance. This standard does not apply to volatile organic compound-contaminated soil, radioactive-contaminated soil, and agricultural land-contaminated soil.
