What this standard covers

This standard specifies feasible technologies for the prevention and control of electroplating wastewater, waste gas, solid waste and noise pollution. This standard can be used as a reference for the environmental impact assessment of construction projects such as electroplating enterprises, electroplating production facilities and electroplating sewage centralized treatment facilities, the formulation and revision of national pollutant discharge standards, pollution discharge permit management and the selection of pollution prevention and control technologies. This standard applies to independent/non-independent electroplating enterprises or production facilities that include electroplating processes, chemical plating processes, and anodizing processes, as well as centralized electroplating wastewater treatment facilities.
