What this standard covers

This standard stipulates the ecological quality evaluation content, index system, evaluation methods and application of evaluation results in desertified areas. This standard is applicable to the ecological quality evaluation of desertification types such as wind erosion desertification, water erosion desertification, freeze-thaw desertification, and salinization in desertification areas across the country. In order to simplify the assessment process and facilitate ecological environment management, various regions can select the dominant desertification types in the region to carry out assessment. Desertification assessment in other natural geographical areas can be carried out with reference to this standard.
