INDUSTRY STANDARD OF THE PEOPLE'S REPUBLIC OF CHINA

HJ 1351-2024

**Ambient air - Source apportionment on particulate matter -
Technical specification for method with receptor models based
on manual monitoring**

环境空气 颗粒物来源解析 基于手工监测的受体模型法技术规范
(English Translation)

Issued on: February 18, 2024

Implemented on: May 1, 2024

What this standard covers

This standard specifies the technical requirements for the main links of the source analysis of ambient air particulate matter based on the manual sampling-laboratory analysis-receptor model method (referred to as "particulate matter source analysis"), including program formulation, basic situation investigation, pollution source and ambient air quality investigation, environmental receptor and pollution source particulate matter monitoring, construction and analysis of environmental receptor component library and source component spectrum library, model calculation, comprehensive analysis evaluation, report preparation, quality assurance and quality control. This standard applies to the source analysis of urban particulate matter. Other areas (such as rural areas, background areas, etc.) can refer to this standard for implementation.
