What this standard covers

This standard specifies the pollution control requirements, as well as the monitoring and environmental management requirements for the collection, storage, transportation, treatment, utilization and disposal of waste salt (hereinafter referred to as waste salt) produced during the production of pesticides, the main component of which is sodium chloride. This standard applies to the pollution control of waste salt during the collection, storage, transportation, treatment, utilization and disposal process, and can be used as a technical reference for environmental impact assessment, design and construction, completion acceptance, pollution discharge permit management, hazardous waste business permit and clean production audit of construction projects related to the treatment, utilization and disposal of waste salt.
