What this standard covers

This standard specifies the dynamic dilution olfactometry method for determining odors emitted in various forms from ambient air and various sources of malodorous pollution (including water bodies). It applies to the determination of odors in ambient air, air at fugitive emission monitoring points, and waste gas samples from stationary pollution sources. The determination method specified herein relies on the human sense of smell and is not limited by the type, number, concentration range, or compositional ratios of the odorous substances.

Document data

International classification (ICS): 13.040.01.

Chinese classification (CCS): Z10.
